Summary

ML Engineer focused on MLOps, cloud infrastructure on AWS, and building end-to-end AI systems for production environments. Committed to taking models from experimentation to real-world deployment at scale.

Technical Skills

Programming languages

Python (Advanced), JavaScript (Intermediate), SQL (Intermediate)

Web

HTML, CSS, Django, Flask, FastAPI, React (Web & Native)

Data Science/ML

PyTorch, Tensor Flow, scikit-learn, Pandas, NumPy, Matplotlib, OpenCV, DVC, MLflow, Label Studio.

Tools

Linux, Git, GitHub, GitHub Actions, Docker, LaTeX, AWS, Power BI

Languages

English (B2)

Achievements

Participant in the Mexican Physics Olympiad, **2018**.

Participant in the International Science Contest of the Tecnológico de Monterrey, N.L., **2018**.

Technical Advisor for the Computer Science program at the Faculty of Engineering, UACH, **2021-2022**.

President of the Student Society of the Faculty of Engineering, UACH, **2022-2023**.

University Advisor of the Faculty of Engineering, UACH, **2022-2023**.

Educational background

Computer science engineer

Universidad Autonoma de Chihuahua, Faculty of Engineering.

Physical engineer

Universidad Autonoma de Chihuahua, Faculty of Engineering.

Work experience

Moneta Market

Machine learning engineer, November 2024 - Present

- Built a computer vision system for autonomous retail (YOLO-based multi-camera product detection), a demand forecasting service, and a customer service automation platform.
- Implemented full MLOps infrastructure on AWS: ephemeral training with Spot Instances, MLflow, Label Studio + S3, Grounded SAM 2 auto-labeling pipeline, and a model hot-swap system for zero-downtime updates.
- Led a small team of engineers and interns toward production deployment at scale.

Grupo Arga

Remote software developer (half time), October 2024 - August 2025

- Developed dual-platform production monitoring solution: React Native mobile app for shop floor workers and web dashboard for administrators.
- Automated part marking workflow using computer vision, reducing waste by 10%.

Autozone Business & Technology Store Support Center

Data science intern, March 2024 - September 2024

- Built recommendation system analyzing 100+ diagnostic trouble codes to find part associations for sales promotions.
- Developed React web app with BigQuery integration, enabling to explore error code patterns and create product bundles.
- Analyzed large datasets using SQL to extract insights on vehicle diagnostics for inventory planning.

SEPA (Servicio Profesional de Asesorías)

Tutor, August 2021 - March 2024

- Delivered personalized Physics and Mathematics instruction to students from elementary through university level.
- Developed educational materials and resources to enhance student engagement and understanding of concepts.

Projects

Pattern recognition

- Use of the Decision Tree algorithm to determine if purchasing a car is profitable.
- Prediction of cryptocurrency cost using time series.
- Prediction of weekly gasoline expenditure for a trailer for a private company, using Decision Tree, Random Forest, KNeighborsRegressor, and Support Vector Machine algorithms.

Summer of scientific research - UACH

Prediction of Walmart Sales using LSTM, GRU, and PROPHET Models.

IC2STEM - UACH

Mentor for a group of 12 high school students in the execution of basic Machine Learning projects.

About me

Engineer with a scientific background focused on solving industrial and academic problems using scientific principles. Continuous learning and critical thinking are my greatest skills, in addition to a high sense of responsibility.
